## Evening Brief

Date: Thursday August 31, 2017

---

### Weather Summary

#### \*\*\* Near Record Heat Returns to Most Areas this Weekend into Early Next Week \*\*\*

Strong high pressure will build across the Great Basin Friday through the holiday weekend, bringing a return of abnormally hot and dry conditions, with temperatures near record highs over the northern half of the Great Basin. Very low RH and poor overnight RH recovery should be expected along with Haines 6 in many areas, increasing chances for holdovers and plume dominated fire growth on existing fires, especially over the northern half of the Great Basin.

Moisture may never truly leave southern areas of the Great Basin with isolated thunderstorms possible over far southern NV, the AZ Strip and southern Utah through the weekend.

Confidence is low with moisture returning associated with Tropical Storm Lidia near the Baja Peninsula. Thunderstorms may start pushing into central areas of Nevada and Utah as early as Sunday and into the Sierra Front on Monday with a push north across NV/UT/AZ Strip and into Idaho by Tuesday. However, this timing is uncertain at the present time. Thunderstorms may also transition to wet fairly quickly if the deep moisture gets pushed north. However, after another few days of near record breaking heat across the northern half of the Great Basin, it is the return of lightning in these areas that will be the biggest concern.

---

### Preparedness Levels

Great Basin	4
National	5

---

#### Great Basin Fire Activity (from Irwin): Light Activity

**New Fires and Acres: 21 fires for 20.8 acres; 35,182 acres large fire growth; 0 new large fires**

---

#### Resources:

- Crews: 11 T1 IHCs in GB: 11 Committed, 0 Day Off.
- GBCC has committed an estimated 141+ Type 3, 4, 6 engines.
- 1-T1 and 3-T2 helicopters are available in GACC.

---

### Great Basin Fire Potential Summary

With thunderstorms the last couple of days, some slight moderation of fuels is possible in areas that get low end wetting rains or higher RH from any recent thunderstorms. However, fuels in many areas

will range from normal late summer dryness, to near record dry levels, with the driest fuels in the Central Idaho mountains.

Near record temperatures and very dry conditions return region wide Friday through the holiday weekend over the northern half of the Great Basin with fuels drying out rapidly once again.

We continue to have a Great Basin Fuels and Fire Behavior Advisory in effect for Nevada, Idaho and Utah, available at the following link:

[https://www.predictiveservices.nifc.gov/fuels\\_fire-danger/GB\\_Fuels\\_and\\_Fire\\_Behavior\\_Advisory.pdf](https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf)
